Summary

Technical Product Manager and CS & AI senior (May 2027) who takes AI products from problem to launch. At Cofactor, shipped a B2B research marketplace from first commit to live users in four weeks and a GDPR notice pipeline built against a legal deadline. Built Iranti, an MCP memory server for coding agents with 15,360 npm downloads and a self-authored eval against Mem0, Shodh, and Graphiti, and Bothy, a clipboard app live on the App Store with a $4.99 Pro unlock.

Skills

Product & Strategy: Roadmapping, PRDs, Jira Backlogs, Pricing, GDPR Compliance
Research & Analytics: User Interviews, Usability & A/B Testing, Eval Design, SQL
AI & Data: MCP Servers, LLM Evals, Claude & OpenAI APIs, PostgreSQL + pgvector
Languages & Tools: Python, TypeScript, Kotlin, SwiftUI, React, Next.js, Figma, Git

Education

Minerva University (1% acceptance rate) San Francisco, CA
Bachelor of Science, Computer Science & Artificial Intelligence *Sep 2023 – May 2027*

Experience

Technical Product Manager, Cofactor Feb 2026 – Present
San Francisco, CA (Remote)

- Pitched the pivot to Scout, started within a week, after a 7-part audit of friction found by onboarding testers
- Shipped the B2B marketplace from first commit to live users in four weeks, onboarding European researchers
- Managed 3-platform roadmap across PRDs, Jira backlog (3 Epics, 9 Features), and VC stakeholder coordination
- Fixed an enqueue and database write race in the GDPR Article 14 notice pipeline, protecting a legal deadline

Process Optimization Analyst, UL Solutions May 2025 – Aug 2025
Fremont, CA

- Reduced test data errors by 50% across product lines by building Python automation with a cross-functional team
- Cut three weeks off testing on an estimated $6M+ program by redesigning three operational workflows
- Implemented validation protocols ensuring regulatory compliance across 200+ technical test procedures

Product Builder, Google Academic Collaboration Sep 2023 – May 2024
San Francisco, CA

- Proposed and prototyped 4 Google Photos features for long-distance relationships with a 5-person team
- Built Figma prototypes and ran quantitative analysis on each round of user studies, iterating with feedback
- Raised engagement 40% in prototype A/B tests across 50+ study participants

Technical Projects

Iranti - Shared Memory Substrate for Multi-Agent Coding | *TypeScript, MCP, PostgreSQL, pgvector, Python*

- Reached 15,360 downloads on npm across 92 releases with no paid marketing, through organic adoption
- Drove 6,049 npm downloads in the three weeks after the April 5 launch posts, with no paid promotion
- Wrote a 4-benchmark eval vs Mem0, Shodh, and Graphiti, finding deterministic replacement beats accumulation
- Resolved 9/10 conflicting writes to one current value in that eval, where Shodh returned both versions 10/10
- Kept 40/40 facts through a full process restart in that eval, tying Shodh, vs 30/40 Mem0 and 23/40 Graphiti
- Designed a cross-tool memory layer on PostgreSQL + pgvector shared by Claude Code, Codex, and Copilot CLI

Bothy - Clipboard Vault App (on the App Store) | *Kotlin Multiplatform, SwiftUI, RevenueCat, Pricing*

- Built a local-first clipboard vault solo for RevenueCat Shipaton 2026, with no accounts and no server
- Priced Pro at a $4.99 lifetime unlock through RevenueCat, gating only pins past 2 and files past 20
- Launched on the iOS App Store after a 12-tester Android closed test, now taking it international

Aloud - Speech AI Learning Project | *Next.js, TypeScript, ElevenLabs TTS API, Forced Alignment*

- Compared 8 open-weight TTS models (Kokoro, Chatterbox, F5-TTS) on license, voice cloning, VRAM, and speed
- Designed zero-shot cloning of a Nigerian-accented voice with whisperX alignment, costed at an est. $2-8/mo
